Tanner Gangl is 17 years old and a Junior at Spectrum High School in Elk River, MN. On January 11, 2022, he was diagnosed with Embryonal Carcinoma (testicular cancer). It started in the testicles and spread through his lymph nodes up the front side of his body. He had one testicle removed. They found tumors in his abdomen, lungs and throat. The largest one is 13cm long in his abdomen. He can no longer feel the lump in his throat anymore, so the chemo is working!
